How To Plan Your Installation

Step 1. Choose appropriate size venting for the appliance and installation.

Step 2. Refer to the Typical Installations for the type of installation similar to your situation. Identify the needed parts for installation.

Step 3. Ensure the overall length of the whole system.

Step 4. Be sure to have appropriate pipes for exhaust, incoming air, and all other required sizes.

Step 5. Ensure that the appliance is compliant with all local building codes.

Step 6. Ensure that the appliance manufacturer's installation instructions are followed.

Step 7. Check for any venting restrictions such as maximum horizontal run, minimum and maximum vertical rise, maximum offset, etc.

Typical Installations

- Cathedral Ceiling
- Fireplace Vertical Termination
- Metal Chimney Conversion
- Masonry Chimney Conversion
- Co-Linear Insert
- Steep-Wall Vertical Horizontal Termination
- Masonry Chimney Conversion

How It Works

Direct vent appliances are ‘sealed combustion systems’ that means the air for combustion is delivered to the appliance through the venting system from outside. As a result, direct vent appliances do not consume warm indoor air for combustion and are not subject to oxygen starvation, poor draft and other problems associated with ‘tight’ energy efficient homes. With sealed direct vent systems, all combustion byproducts are safely vented out through the venting system, eliminating fumes, water moisture, and indoor air contamination.
