PolyPro® By DuraVent Approval & Installation Requirements

Allied Air Enterprises is pleased to announce that PolyPro by DuraVent vent pipe, fittings and terminations have been approved for use on all models of Allied Air Enterprises condensing gas furnaces. Both 2” and 3” vent pipe diameters have been approved as an alternative to PVC and ABS materials and ULC S636 pipe in Canada, when installed per PolyPro by Duravent installation instructions.

When using the PolyPro by DuraVent venting system, the vent pipe requirements stated in the unit installation instruction (minimum & maximum vent lengths, termination clearances, etc.) apply and must be followed. Follow instructions provided with PolyPro by DuraVent venting system where applicable or if requirements are more restrictive. The PolyPro by Duravent venting system must also follow the un-insulated and unconditioned space criteria listed in the furnace installation instruction.

Allied Air Enterprises has approved the use of DuraVent manufactured vent terminations. When applying these terminations, use 12 feet as the equivalent vent length in addition to the equivalent length of the pipe and fittings.
