NORDYNE is pleased to announce that the PolyPro venting system manufactured by M&G DuraVent is now approved for use with NORDYNE G7/GC2 condensing gas fired furnaces. PolyPro is also listed by Intertek to ULC S636 standard in Canada.

The PolyPro venting system includes both 2" and 3" solid piping as well as fittings and terminations for new applications. Flexible piping, fittings, terminations and accessories also in 2" and 3” are available for retrofit applications through existing masonry chimneys or metal vents.

PolyPro solid pipe venting features gasketed fittings and a unique locking system that requires no screws to secure, saving the contractor time, money and the aggravation of using solvents and glues.

Please follow PolyPro installation instructions in coordination with NORDYNE installation instructions for the selected condensing gas fired furnace. Please note that the minimum slope for M&G DuraVent PolyPro is 5/8” drop per 1 foot horizontal run.

DuraVent provides a 10 year warranty from date of purchase.

For further information and the most up to date installation instructions please visit M&G DuraVent at [www.duravent.com](http://www.duravent.com).
